

TESTIMONIAL

LETTUCE

“My 13 year-old granddaughter decided to do an experiment with SumaGrow® for her 8th grade Honors Science Class. She bought a packet of lettuce seeds dug some dirt out of her back yard and planted an equal number of seeds in each of two pots. One pot she treated with SumaGrow®, one was left on its own, except that she watered both with about 4oz of water every day or so. I visited with her over the Thanksgiving weekend (25 days later), and the attached photo is what I saw. I think she’s likely to win, don’t you?”
